

streets\_utils/streets  
\_api/intersection\_server  
\_api/src/models/OAIEnum.h

```
graph TD; A["streets_utils/streets  
_api/intersection_server  
_api/src/models/OAIEnum.h"] --> B["QJsonValue"]; A --> C["QMetaType"]; A --> D["QString"];
```

The diagram illustrates the relationship between a source file and three Qt classes. A central box at the top contains the file paths: 'streets\_utils/streets', '\_api/intersection\_server', and '\_api/src/models/OAIEnum.h'. Three blue arrows point downwards from this box to three separate boxes below it. The left box contains 'QJsonValue', the middle box contains 'QMetaType', and the right box contains 'QString'.

QJsonValue

QMetaType

QString
